June 10, 2019

Project Name: 
Project Address: 
Project Scope: Asbestos Inspection

Dear [Name],

Guzi-West certified asbestos personnel collected suspect asbestos-containing material samples at the structure referenced above on June 6, 2019. Following sample collection, the samples were submitted under chain-of-custody documentation to a California-certified laboratory for analysis by polarized light microscopy. As evidenced by the attached laboratory report, asbestos was identified in the following materials and locations:

- Acoustic Ceiling Texture (10% Chrysotile Asbestos)

We will follow up with a project invoice within 7 business days. Thank you for the opportunity to work on the project, and feel free to call/e-mail if you have any questions.

Sincerely,

Guzi-West Inspection and Consulting, LLC
Certified Asbestos Consultant

These results relate only to the samples tested and must not be reproduced, except in full, without the approval of the laboratory. Although PLM analysis is commonly performed to determine the presence or absence of asbestos in building materials, the EPA methods acknowledge that analysis by PLM is subject to limitations and for certain materials, such as vermiculite, a more sophisticated methodology may be necessary.
